

Compsee's Mobile Application Terminal
Custom Controls Overview
Version 2.1.1

Compsee's M.A.T. Custom Controls are a set of Visual Studio .NET toolbox controls designed to provide solutions to some of the more challenging programming tasks of a mobile device application.

This document is provided as a quick review of the MAT Custom Controls distributed with this installation package. Additional information related to each custom control is available in the "Compsee MAT Custom Controls Reference Guide-v2.1.0" located on the Mobile Application Terminal Support CD and also from the Compsee Web Site.

SW API for .NET (SWAPI_NET.dll)	2.0.0.0	Dynamically manipulate and control the SuperWedge and its data.
SystemParms (SystemParms.dll)	2.0.0.0	Retrieve System and Platform Information.
Vibrate (Vibrate.dll)	2.0.0.0	Manipulate the Vibrator.

Custom Controls 2.1.1 Details

Improvements List:

- In Dock-v1.0.0.0
 - Introduce the InDock status control. This control reports the status of the dock to the user.

Custom Controls 2.1.0 Details

Improvements List:

- SWAPI_NET-v2.0.0.0
 - Introduce SuperWedge api support for .NET. This control provides control of the scanner and data via api calls to the SuperWedge application. The user can dynamically control the input source, retrieve and manipulate data and much more. Refer to the “Compsee MAT Custom Controls Reference Guide” for more information on the full capabilities of this control.

Custom Controls 2.0.0 Details

Improvements List:

Set Default Namespace to Compsee.Controls.ControlName for each custom control.
Distribute two new custom controls. The controls are MultiApp.dll and SystemParms.dll.

Custom Controls 1.0.3 Details

Installation version 1.0.3 corrects an installation path error.

Custom Controls 1.0.2 Details

Improvements List:

- Keypad Remap-v1.0.0.4
 - Made improvements to remapping functionality for the right and left scan keys.
