COMMUNIQUE: 235

DATE: 02-09-01

PAGE: 01 of 01

SUBJECT: Apex File Transfer Utility - DX.EXE

Compsee announces the release of the Apex File Transfer Utility - DX.exe.

DX.EXE is an easy-to-use file transfer utility that can be used to transfer files to and from the Apex PDT to a PC or other serial device. The DX.EXE utility program uses the YMODEM transfer protocol.

The program will work under Windows® 95, 98, NT, & 2000 or with other PC communication programs such as HyperTerminal® and PROCOMMPLUS® to support file transfers. The program can be conveniently run from the command line using the following syntax and options.

The program can also be started without entering any command line parameters by typing dx (refer to Section 8 Communications in the Compsee Apex Technical Reference Manual for additional details).

Syntax:

dx /[option] [filename]

Option Description

use COM#, where # equals 1 - 4

bn change baud rate, where n is new baud rate. Acceptable rates include 300, 1200, 2400, 4800, 9600, 19200, 38400, 57600, and 115200. Default = 115200.

i specifies IR port usage

l gets file names from a text file listing (allows multiple file transfers)

q quiet mode (flip/flop)

r receive file(s)

s send file(s)

v verbose mode

w use wired RS-232 connection (i.e. Serial End Cap use)

x exit after transfer

? displays help

Filename The filename to be transferred (can include wildcard characters).

Defaults: baud rate defaults to 115,200, 8, 1, n, no flow control

Examples:

dx /b19200 /s apex3_r2.rom

Sends the file apex3_r2.rom at 19200

dx /b19200 /r

Receives a file at 19200 and places it in the local directory

dx /b19200 /s *.rom

Sends files with the .rom extension at 19200
